**Geothermal Energy In The 21st Century**

In the 20th century, demand for electricity led to the consideration of geothermal power as a generating source. Prince Piero Ginori Conti tested the first geothermal power generator on 4 July 1904, at the same Larderello dry steam field where geothermal acid extraction began. It successfully lit four light bulbs. Later, in 1911, the world's first commercial geothermal power plant was built there.

**Geothermal energy - Wikipedia**

We can assume that the 21st century can face the use of low-temperature geothermal resources within the binary cycles and further development of high-temperature and geopressured systems for electricity generation, but the speed of geothermal energy implementation is still extremely low, also for direct geothermal energy use for heating purposes.
