Algebra. Chapter 3 - Functions. Topic 3.8 - Piecewise-Defined Functions
Piecewise-Defined Functions demonstrates the process for graphing functions which are defined separately for different parts of the domain. The absolute value function is discussed in detail. Transcript.

~~Topic 3.8 - Piecewise-Defined Functions - Algebra~~
Functions assign outputs to inputs. Some functions have simple rules, like "for every x , return x^2 ."
However, there can be other rules that are more elaborate. For example, "If $x < 0$, return $2x$, and if $x \geq 0$,

return $3x$." These are called *piecewise functions*, because their rules aren't uniform, but consist of multiple pieces.

Let's see, if you, yeah, that is negative 66 over 11, which is equal to negative six. So when x is equal to 10, our function is equal to negative six. And so this one actually doesn't have any jumps in it. It could've, but we see, so there we have it. We have graphed this function that has been defined in a piecewise way.
