SQL command for inserting or adding a row of data into the MySQL database table is `INSERT`. The format is as follows: INSERT INTO table_name (column_1, column_2, ... column_n) VALUES (value_1, value_2, ... value_n); To insert a row of data into table, `INSERT` keyword is followed with keyword `INTO` and a name of the table. Following column names in the parenthesis and separated by commas is optional, but is a good practice to define the columns to be sure that the proper data will be ...

False values are stored as zero and true values as one. This datatype has only two values. MySQL does not provide a built-in Boolean data type. It uses TINYINT(1) instead which works the same. For convenience, MySQL provides synonyms of TINYINT(1) as BOOLEAN or BOOL, so that you can use them for simplification. You can use BOOLEAN like this-
