Anatomy of the
Urinary System. The
urinary system
consists of two
kidneys, two ureters,
a urinary bladder, and
a urethra. The
kidneys alone perform
the functions just
described and
manufacture urine in
the process, while the

Download Free Anatomy And

other organs of the urinary system provide temporary storage reservoirs for urine or serve as transportation channels to carry it from one body region to another.

Humans have the capacity to excrete toxins. For instance, the urinary system is major excretory system of the body. It helps in homeostasis specifically in electrolyte balance, fluid balance and acid-base balance.

The urinary system consists of the kidneys, ureters, urinary bladder, and urethra. The kidneys filter the blood to remove wastes and produce urine. The ureters, urinary

Download Free Anatomy And

bladder, and urethra together form the urinary tract, which acts as a plumbing system to drain urine from the kidneys, store it, and then release it during urination.
