Skeletal System - Practice Test Questions & Chapter Exam ...

The human skeleton, like that of other vertebrates, consists of two principal subdivisions, each with origins distinct from the others and each presenting certain individual features. These are (1) the axial, comprising the vertebral column—the spine—and much of the skull, and (2) the appendicular, to which the pelvic (hip) and pectoral (shoulder) girdles and the bones and cartilages of the limbs belong.

human skeleton | Parts, Functions, Diagram, & Facts ...

The skeletal system consists of bones and their associated connective tissues, including cartilage, tendons and ligaments. FUNCTIONS OF THE SKELETAL SYSTEM Bone is made up of several different tissues working together: bone or osseous tissue, cartilage, dense connective tissue, epithelium, adipose tissue and nervous tissue. It is complex and dynamic living tissue.
