Cellular Respiration is
a chemical process
with the following
equation: $C_6H_{12}O_6 +$
 $O_2 \rightarrow H_2O + CO_2$. All

Access PDF Ap Bio Cellular

organisms, including those capable of photosynthesis, go through the process of cellular respiration. The overall reaction breaks down a carbohydrate, most frequently modeled by glucose, and converts the energy stored in that molecule into the most basic cellular energy, ATP.

mitochondria FADH₂ and NADH transfer their electrons to the ETC. The electrons pass down a series of proteins, pumping out H⁺ atoms every time they go down a level. The Electron finally stops when it reaches Oxygen (the last electron receptor) and water is produced.
