Archaeology is the study of the ancient and recent human past through material remains. Archaeologists might study the million-year-old fossils of our earliest human ancestors in Africa. Or they might study 20th-century buildings in present-day New York City.

What is Archaeology

A Trusted Source article created in partnership with the University of Oxford. (opens in a new window) Archaeology is the study of past human societies through the study of the physical remains and traces that survive them – anything that might have been part of human experience, be it a stone tool or a farming landscape.

What is archaeology? | National Trust

Archaeology, sometimes spelled archeology, is the study of human activity through the recovery and analysis of material culture. Archaeology is often considered a branch of socio-cultural anthropology, but archaeologists also draw from biological, geological, and environmental systems through their study of the past.

Archaeology—Wikipedia

Archaeology is one part of the field of anthropology. Anthropology is a social science which tries to learn more about humans and human culture. There are a lot of different ways to do this, but at its core anthropology is about people.

What is Archaeology?—Archaeology for All

Archaeology is an inherently fascinating subject. Archaeologists study the lives of our ancestors – from their cradles to their graves – through the remains they left behind that we dig up. There are many parts to archaeology and each one is important for creating the big picture of past lives.

What is archaeology? | The British Academy

Archaeology is practiced around the world by archaeologists who work with people from a wide variety of other disciplines to help answer questions about who we are and where we came from. In doing...

What is Archaeology? | Archaeology Definition | Live Science

Archaeology helps us understand not only where and when people lived on the earth, but also how they have lived. Archaeologists examine change over time, seeking patterns and explanations. They ask questions about how and when humans first came to inhabit the Americas or the origins of agriculture and complex societies.

About Archaeology

Archaeology, also spelled archeology, the scientific study of the material remains of past human life and activities. These include human artifacts from the very earliest stone tools to the man-made objects that are buried or thrown away in the present day: everything made by human beings—from simple tools to complex machines, from the earliest houses and temples and tombs to palaces, cathedrals, and pyramids.

Archaeology | Britannica

Archaeology is the study of the material remains of the human past - artifacts (tools, jewelry) (1), technology, buildings and structures (graves and grave markers including the grave goods), how humanity altered a landscape or other natural feature. Archaeology studies the people in the past as indicators of the things that anthropologists study and more.

Archaeology: Examining Its Past and the Future—

Archaeology definition, the scientific study of historic or prehistoric peoples and their cultures by analysis of their artifacts, inscriptions, monuments, and other such remains, especially those that have been excavated. See more.

Archaeology | Definition of Archaeology at Dictionary.com

Bad archaeology is when they tell us that the bones from Liang Bua are of a new species of hominins, when they tell us that we all descend from a single female in sub-Saharan Africa, a model invented by archaeology professor Reiner Protsch.who had to be sacked from his Frankfurt university in 2002 because he was a charlatan.

Bad Archaeology: what is it?—Bad Archaeology

Archaeology is a unique subject, which teaches you brand new skills you may not have touched upon in your previous studies. This is good news for the budding archaeologist, because it means that many universities don't require you to have taken certain subjects to get a place on their degree.
