Overview. IEEE 1471 is the short name for a standard formally known as ANSI/IEEE 1471-2000, Recommended Practice for Architecture Description of Software-Intensive Systems. Within Institute of Electrical and Electronics Engineers (IEEE) parlance, this is a "recommended practice" , the least normative of its standards.

IEEE 1471 - Wikipedia

Architecture is recognized as a critical element in successful software-intensive systems—complex systems where software contributes essential influences to the design, construction, deployment and evolution of the system as a whole. There is a growing body of knowledge in the application of architectural concepts to these systems to achieve the benefits of reduced costs and improved system qualities such as usability, flexibility, reliability, and interoperability.

The Architecture of Software-Intensive Systems

The software architecture of a program or computing system is a depiction of the system that aids in understanding how the system will behave. Software architecture serves as the blueprint for both the system and the project developing it, defining the work assignments that must be carried out by design and implementation teams.

The book is for architecting software intensive systems but many of the practices found in the book can be applied to building applications. An example of what I mean by applications is Web applications, RIAs, or thick client applications that are not delivered as bundled software releases or any system that is not hardware intensive.
