Air pollution, release into the atmosphere of various gases, finely divided solids, or finely dispersed liquid aerosols at rates that exceed the natural capacity of the environment to dissipate and dilute or absorb them. These substances may reach concentrations in the air that cause undesirable health, economic, or aesthetic effects.

### Air pollution - Encyclopedia Britannica | Britannica

Atmospheric pollution. Atmospheric pollution (also commonly called air pollution) is derived chiefly from the spewing of gasses and solid particulates into the atmosphere. Many pollutants - dust, pollen, and soil particles - occur naturally, but most air pollution, as the term is most commonly used and understood, is caused by human activity. Although there are countless sources of air ...

### Atmosphere and Air Pollution (Encyclopedia of ...

Atmospheric pollutants are substances that accumulate in the air to a degree that is harmful to living organisms or to materials exposed to the air. Common air pollutants include smoke, smog, and gases such as carbon monoxide, nitrogen and sulfur oxides, and hydrocarbon fumes. While gaseous pollutants are generally invisible, solid or liquid pollutants in smoke and smog are easily seen.

### Atmospheric (Air) Pollutants | Encyclopedia.com

Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) [...] The statements, opinions and data contained in the journal Atmosphere are solely those of the individual authors and contributors and not of the publisher and the editor(s). MDPI stays neutral with regard to jurisdictional claims in published maps and institutional affiliations.

### Atmosphere | Free Full Text | Does Air Pollution Influence ...

Air pollution is multiple and old. They have consequences not only for human health but also for the biosphere, in particular the planet's vegetation, atmosphere and climate. Releases to the atmosphere resulting from human activities are added to naturally occurring constituents that are often of the same nature as pollutants.

### Air pollution - Encyclopédie de l'environnement

About 95% by weight of the Earth's atmosphere lies below the 25km (15mi) altitude; the mixture of gases in the lower atmosphere is commonly called air. The atmosphere's composition by weight is: nitrogen 78.09%, oxygen 20.9%, argon 0.93%, 0.03% of carbon dioxide, plus 0.05%

### Atmosphere | Encyclopedia.com

Air Pollution Air pollution is a phenomenon by which particles (solid or liquid) and gases contaminate the environment. Such contamination can result in health effects on the population, which might be either chronic (arising from long-term exposure), or acute (due to accidents).

### Air Pollution | Encyclopedia.com

Air pollution - Air pollution - Greenhouse gases: Global warming is recognized by almost all atmospheric scientists as a significant environmental problem caused by an increase in levels of certain trace gases in the atmosphere since the beginning of the Industrial Revolution in the mid-18th century. These gases, collectively called greenhouse gases, include carbon dioxide, organic chemicals ...

### Air pollution - Greenhouse gases | Britannica

Air pollution is the presence of substances in the atmosphere that are harmful to the health of humans and other living beings, or cause damage to the climate or to materials. There are different types of air pollutants, such as gases (such as ammonia, carbon monoxide, sulfur dioxide, nitrous oxides, methane and chlorofluorocarbons), particulates (both organic and inorganic), and biological molecules.
