Most commands in Stata allow (1) a list of variables, (2) an if-statement, and (3) options. 1. A list of variables consists of the names of the variables, separated with spaces. It goes immediately after the command. If you leave the list blank, Stata assumes where possible that you mean all variables.

natural and ...

Listing data and basic command syntax

Stata tries very hard to make all its commands work the same way. Spending a little time learning the syntax itself will make it much easier to use commands later. To carry out the examples in this section, you'll need to have created an SFS folder and downloaded the gss\_sample data set as described in Managing Stata Files .
