generally based on body-weight (in kilograms) or specific age ranges. In the BNF and BNF for Children, the term neonate is used to describe a newborn infant aged 0-28 days. The terms child or children are used generically to describe the entire range from infant to adolescent (1 month-17 years).

Prescribing in children | Medicines guidance | BNF content ...

In BNF for Children, the term neonate is used to describe a newborn infant aged 0-28 days. The terms child or children are used generically to describe the entire range from infant to adolescent (1 month-17 years). An age range is specified when the dose information applies to a narrower age range than a child from 1 month-17 years.

Guidance on prescribing | Medicines guidance | BNFC ...

Prescribing for children: weight, height, and gender. The table below shows the mean values for weight, height, and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary ...
