Bootstrapping Trust In Modern Computers

Bootstrapping Trust in Modern Computers. Trusting a computer for a security-sensitive task (such as checking email or banking online) requires the user to know something about the computer's state. We examine research on securely capturing a computer's state, and consider the utility of this information both for improving security on the local computer (e.g., to convince the user that her computer is not infected with malware) and for communicating a remote computer's state (e.g., to ...

Bootstrapping Trust in Modern Computers - Microsoft Research

2 Bootstrapping Trust in Modern Computers to climb, CPU vendors are increasingly willing to provide hardware support for se-cure systems (see, for example, Intel and AMD's support for virtualization [3,93], and Intel's new AES instructions, which provide greater efficiency and resistance to side-channel attacks [81]).

Although the recent "Trusted Computing" initiative has drawn both positive and negative attention to this area, we consider the older and broader topic of bootstrapping trust in a computer. We cover issues ranging from the wide collection of secure hardware that can serve as a foundation for trust, to the usability issues that arise when trying to convey computer state information to humans.
