steps used to get the answer. If you need a multiplication calculator that shows work, whether for your homework or for an-class demonstrations, this calculator has you covered!

Multiplication Calculator that Shows Work

In a previous part of Lesson 1, work was described as taking place when a force acts upon an object to cause a displacement. When a force acts to cause an object to be displaced, three quantities must be known in order to calculate the work. Those three quantities are force, displacement and the angle between the force and the displacement.
