### If You Have Head or Neck Cancer

About 75% of head and neck cancer is caused by the use of alcohol or tobacco, including smokeless tobacco. Other risk factors include betel quid, certain types of human papillomavirus, radiation exposure, certain workplace exposures, and Epstein-Barr virus. About 90% of head and neck cancers are squamous cell cancers.

### Head and neck cancer—Wikipedia

Cancers that are known collectively as head and neck cancers usually begin in the squamous cells that line the moist, mucosal surfaces inside the head and neck (for example, inside the mouth, the nose, and the throat). These squamous cell cancers are often referred to as squamous cell carcinomas of the head and neck.

### Head and Neck Cancer Treatment, Symptoms & Causes

Most head and neck cancers are squamous cell cancers. Squamous cell head and neck cancers don't usually spread to other body organs. But they can spread to lymph nodes (also called lymph glands) in the neck. Sometimes, the first sign of cancer that a person notices is a swollen (enlarged) lymph node in the neck.

### Throat cancer | Head and neck cancers | Cancer Research UK

Cancers that are known collectively as head and neck cancers usually begin in the squamous cells that line the moist, mucosal surfaces inside the head and neck (for example, inside the mouth, the nose, and the throat).
