I've got a Carver M-1.5t amp that I've had for 20+ years. The speakers always make a loud "THUMP" sound when the amp is powered on/off. In the past this has never bothered me too much (I learned to live with it), but its much more bothersome now with my new speakers. I've thought of some kludge ways to fix the problem, like switching the speakers with a resistive load during power-up and power ...

Manual Library / Carver. Carver M-1.0t. Magnetic Field Power Amplifier (1986) add a review. Description . The Carver M-1.0t magnetic field amplifier was released in June of 1986. The original version of the amplifier had inverting outputs, that is the right channel output is inverted (180 degrees) from the left channel output. Starting at serial number 4500 (or 70100000), the amplifier was ...

The owners' manuals deal with this. All Bob Carver Corp amplifiers can repair defective tubes if the failure is due to an impurity within the glass bottle--by far, the most common cause of failure. There are two fuses on the back panel. Your "tube" fuse blew to protect the tube and supporting circuitry. No other brand can do this. Replace the fuse and the tube is now "healed" and you may ...

M-1.0t MARK II Manual Addendum The M-1.0t has to be one of the most under-rated amplifiers of all time. It's rumored that this was done to fit the m-1.0t in the model line (0.5, 1.0, 1.5 and 4.0). It's also suggested that it was rated at 200W to match the Conrad Johnson Premier V rating (the \$12,000 tube amplifier it was transfer function modified to sound like). This is the amp that won the ...

Bob Carver took it back with him when the Challenge was over, where it was used as the prototype for the M1.0t amplifier that was released in 1986. Stereophile reviewed this model in April 1987 (review not yet posted in our archives) and found that it neither measured nor sounded like the C-J tube amp of which it was supposed to be a clone. The null I measured between the production M1.0t and ...
