Onchocerciasis is the world's second leading infectious cause of blindness. In the 1970s, blindness affected up to 50% of adults in some regions in West Africa, and people abandoned the fertile river valleys in fear of contracting the disease. Poverty and famine increased.

WHO | Signs, symptoms and treatment of onchocerciasis  
Onchocerciasis occurs mainly in tropical areas. More than 99% of infected people live in 31 countries in sub-Saharan Africa. These are: Angola, Benin, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Republic of Congo, Côte d'Ivoire, Democratic Republic of the Congo, Equatorial Guinea, Ethiopia, Gabon, Ghana, Guinea, Guinea-Bissau, Kenya, Liberia, Malawi, Mali, Mozambique, Niger,

Onchocerciasis (River Blindness) Treatment, Symptoms ...

Onchocerciasis is a rare tropical parasitic disease transmitted by a black fly. Infection by the parasite can cause eye and skin problems. In humans, the parasitic worms live under the skin (subcutaneous nodules) and produce larvae (microfilariae). The larvae are found throughout the body, but especially in the skin and eyes. R
