Chapter 7 Biology Study Guide Page 1
8/30/2011. CHAPTER 7 BIOLOGY –
The Working Cell: Energy from Food.
-Biologists classify/group organisms by
how they get their food. oAutotrophs =
“self feeders”; make their own food
Make food through the process of
photosynthesis (using the sun’s
energy to combine water and carbon
dioxide and make sugar) Also called
producers oHeterotrophs = organisms
that cannot make their own food Also
known as consumers (get their energy
by eating producers or ...

Biology Chapter 7 Study Guide Terms:

Photon: a particle representing a quantum of light or other electromagnetic radiation. Carries energy. Chlorophyll: a green pigment, present in all green plants and in cyanobacteria, responsible for the absorption of light to provide energy for photosynthesis. Its molecule contains a magnesium atom held in a porphyrin ring. Photosynthesis: the process by which green plants and some other organisms use sunlight to synthesize foods from carbon dioxide
