placing wooden sticks inside of the elements. Then, place one of the saturated sticks into the flame. Finally, observe the various colors that will appear based on the element that is tested.

Flame Test Lab Report by Jodeci Mitchell - Prezi

Analysis of this light can be used to identify elements and molecules. In today's lab, we will observe the visible range of light emission. Objectives 1. Perform a flame test to identify the characteristic color of metal ions. 2. Identify the metal ion in an unknown solution. 3. Calculate the energy of

Flame Test Lab Activity Key

To do a flame test with each metal salt dip your inoculation loop into your metal salt and get a film of the solution of a salt inside the loop (swirl the loop around in the solution) and bring it into the hottest part of the flame. If this produces poor color then try the edge of the burner flame.

produced by certain metallic Ions when vaporized in a flame. Identify unknown metallic Ions by means of its flame test.

Flame Test Lab - Robert Amador

Method: Clean platinum or nichrome wire by dipping it into hydrochloric acid then placing it in the roaring flame (this is repeated until the wire no longer produces a colour in the flame). The end of the wire is dipped into fresh hydrochloric acid and then into the solid sample under test. The end of the wire should then be placed into a non-roaring, non-luminous

Flame Tests | Edexcel IGCSE Chemistry Notes

When the boric acid was in the flame, you probably notice a bright green portion of the flame. You may have seen it only briefly but it was there. The green color denotes the presence of the element boron (B) which you'd expect in boric acid. The cream of tartar yielded a purple-colored flame. Purple is associated with the presence of potassium (K).
