In circular motion, a force must act on body as its direction of velocity changes. This force is called Centripetal force. When moon revolves around earth in circular path, gravitational force of earth provides the centripetal force to moon for circular motion. When planets revolve around Sun, gravitational force of Sun provides the centripetal force to planets. Thrust and Pressure. Thrust ...

Q.12. \*Show that linear speed of a particle performing circular motion is the product of radius of circle and angular speed of particle. OR Define linear velocity. Derive the relation between linear velocity and angular velocity. [Mar 02, Mar 96, 08, 12, Oct 09] Ans: Linear velocity: Distance travelled by a body per unit time in a given direction is called linear velocity. It is a vector ...
