The Fluid Mechanics Teaching Laboratory is being used to deliver the wet-lab portion of the CE365, Hydrology and Hydraulic Engineering, class. It recently underwent an upgrade (2018) as the department was able to secure about \$70K to expand the list of experiments that go with the above course. The course is now able to not only offer a selection of experiments to choose from for any given ...

Fluid Mechanics and Hydraulics | The City College of New York

Hydraulic engineering consists of the application of fluid mechanics to water flowing in an isolated environment (pipe, pump) or in an open channel (river, lake, ocean). Civil engineers are primarily concerned with open channel flow, which is governed by the interdependent interaction between the water and the channel.

Hydraulics includes the study and analysis of fluids when in motion and stationary. The part of Hydraulics which deals with the study of static behavior and interaction of fluids is called as Hydrostatics; the part dealing with fluid in motion is called Hydrodynamics. In Civil Engineering Hydraulics we study fluid properties and behavior in different civil engineering applications, such as, flow of water through canals for irrigation, flow through public supply pipelines and water drainage ...

Hydraulic engineering as a sub-discipline of civil engineering is concerned with the flow and conveyance of fluids, principally water and sewage. One feature of these systems is the extensive use of gravity as the motive force to cause the movement of the fluids. This area of civil engineering is intimately related to the design of bridges, dams, channels, canals, and levees, and to both sanitary and environmental engineering. Hydraulic engineering is the application of the principles of fluid m
