Osteichthyes - Wikipedia

Kate Broome on February 5, 2018 1 Comment. Sharks do not have bones; instead, they have cartilage that makes up their skeleton. Sharks make some bone material for their teeth and fin spines but for the most part, they are made up of cartilage, the same soft flexible material that makes up the end of a human nose.

Do Sharks Have Bones? | Science Trends

Technically, the most obvious disparity between bony vs cartilaginous fish comes from the fact that the skeleton of bony fish is made of bones alone, while that of cartilaginous fish is made of cartilage. The sharks are cartilaginous fish, and you can see them in Blue Planet. There are more than 20,000 fish species in the world.
