Enzyme kinetics is the study of the chemical reactions that are catalyzed by enzymes. In enzyme kinetics, the reaction rate is measured and the effects of varying the conditions of the reaction are investigated. Studying an enzyme's kinetics in this way can reveal the catalytic mechanism of this enzyme, its role in metabolism, how its activity is controlled, and how a drug or an agonist might inhibit the enzyme.

Enzyme Kinetics: Kinetic Study of Enzymatic Reactions

Enzymes are protein catalysts that accelerate the rates at which reactions approach equilibrium. Enzyme kinetics is the branch of biochemistry that deals with a quantitative description of this process, mainly, how experimental variables affect reaction rates. The variables that are studied include the concentrations of the enzymes, substrates (reactants), products, inhibitors, activators, the pH, temperature, and ionic strength.
