~~Understanding Cone 6 Glazes~~ ~~Crystalline Glazes~~

The macro-crystalline glazes, or more commonly known simply as crystalline glazes, have crystals that grow large enough to see. The glaze on a fired pot is generally an amorphous supercooled liquid. As the glaze is melted and cooled in the kiln, glass molecules bond together in random strings. Crystals occur if the glaze is fluid enough to allow molecules to move more and hot enough long enough to allow the glaze molecules to arrange themselves in structured strings, or crystals.

~~Understanding Crystalline Glazes in Pottery~~

Crystalline glazes contain a large proportion of zinc oxide compared to standard glazes, sometimes comprising as much as 30% of the glaze. Zinc oxide is easily reduced to the metal at temperatures above 1742°F and the metal alone melts at 786°F and boils at 1697°F.

Did you scroll all this way to get facts about crystalline glazes? Well you're in luck, because here they come. There are 1852 crystalline glazes for sale on Etsy, and they cost \$80.50 on average. The most common crystalline glazes material is ceramic. The most popular color? You guessed it: blue.

~~Crystalline glazes | Etsy~~

Crystalline glazes have a magical quality that appeals to many ceramicists, but producing these glazes can be technically difficult. Diane Creber tackles the problems encountered in using this challenging medium.

~~Crystalline Glazes (Ceramics Handbooks): Creber, Diane ...~~

Crystalline glazes have high thermal expansion and craze, crazed glazes are not considered functional and they severely weaken fired ware. Also, because crystalline glazes have high melt fluidity they will run downward on the inside functional surfaces of ware forming a pool at the base. The thermal expansion of the thick glass mass will almost certainly be higher than the body, it will thus have the power to impose its cracks onward into the body matrix.

~~Crystalline glazes - Digitalfire~~

Crystalline is the art of growing crystals on pottery during the firing process. It is a special effects glaze made primarily of particles of zinc oxide and silica. These two ingredients, along with others, are mixed with water and applied to the piece in a thick paste. I image at left is a Phil Morgan vase we bought some years ago.
