From the data structure point of view, following are some important categories of algorithms – Search – Algorithm to search an item in a data structure. Sort – Algorithm to sort items in a certain order. Insert – Algorithm to insert item in a data structure. Update – Algorithm to update an existing item in a data structure.

Data Structure and Algorithms Tutorial - Tutorials Problem – Design an algorithm to add two numbers and display the result. Step 1 – START Step 2 – declare three integers a, b & c Step 3 – define values of a & b Step 4 – add values of a & b Step 5 – store output of step 4 to c Step 6 – print c Step 7 – STOP. Algorithms tell the programmers how to code the program.
