The database management system advantages in the earlier period required data to be structured so that it could help in the manner that it was accessed and stored. This means that data which was stored in database records were linked to relevant data via pointers namely hierarchical and network databases.

An Information system (IS) is a formal, sociotechnical, organizational system designed to collect, process, store, and distribute information. In a sociotechnical perspective, information systems are composed by four components: task, people, structure (or roles), and technology. Information systems can be defined as an integration of components for collection, storage and processing of data ...
