~~Depression And Non Suicidal Self Injury~~

Suicidal ideation and attempts are thoughts and behaviors with intent to die. Non-Suicidal Self-Injurious Behavior (NSIB) is the deliberate, self-inflicted destruction of body tissue resulting in immediate damage without suicidal intent, and the purpose is not culturally sanctioned. These behaviors are not uncommon among adults and are surprisingly common among adolescents and even pre-adolescents.

~~Depression And Non Suicidal Self Injury~~

Suicidal depressed adolescents view themselves as more depressed and violent than do non-suicidal depressed individuals and were less anxious about their parents. Conclusions: The two depressed samples (suicidal vs. non-suicidal individuals) have only very few dissimilarities. There are, however, some essential differences between the parental and adolescent perceptions of the suicidal and depressive symptoms of the adolescent.

Although self-injury is different than suicide, many people who self-injure may be depressed and may indicate that life is not worth living. They may have thoughts of death but no actual intention to die. People who self-injure have a hard time dealing with their feelings. Self-injury is used to reduce, manage or escape from intense emotions.
