The detection in this method is performed by passing a liquid or vapor containing the target explosive over the surface of a chip containing tens to hundreds of silicon nanowire sensing elements. Molecules of the explosive material interact with the surface of the nanowires and as a result induce a measurable change in the electrical properties of the nanowire.

Explosive detection - Wikipedia

Some specific aspects of explosive behaviour of liquid explosives are discussed. Important procedures for the detection of liquid explosives and limits for detection of these products by detection techniques are considered. Some Countermeasures against misusing of liquid explosives to bomb attacks has been proposed.
