Rheological investigation of cosmetics and pharmaceuticals. The rheological characteristics of cosmetics and pharmaceuticals are important for production, packaging, filling, and storage. Customers appreciate the sensation of a skin cream when applied; they want the toothpaste to remain on the brush after squeezing it out of the tube, and they want medicine in the optimal condition to take effect wherever it should.

Rheological investigation of cosmetics and pharmaceuticals—
This volume in the Cosmetic Science and Technology series covers the important rheological aspects of cosmetic and toiletry formulations, including theoretical physical chemistry, instrumentation and measuring techniques, raw materials and stability predictions. The work discusses the specific rheological requirements of nail polish, antipersirants and deodorants, dentifrices, hair care products, creams and lotions.

Emulsion Rheology | Rheological Properties of Cosmetics—
Rheological additives for cosmetics provide thickening, stabilization, anti-setting, flow and leveling, spreadability and sprayability. They also provide binder, absorption and antistatic properties.

Rheological Additives for Cosmetics—ECKART Effect Pigments
RHEOCIN is a hydrogenated castor oil derivative designed for use in cosmetic and personal care systems as a thixotropic gellant for oil phases. Rheological control with RHEOCIN provides excellent thickening effect and pigment suspension. The efficiency of RHEOCIN is sensitive to temperature and system polarity.

Rheological Additives for Cosmetic Applications
The major recent advances in the rheology of food, cosmetics and pharmaceuticals have been developed in the fields of emulsions and gels. Concerning emulsion rheology, this review has been specially focused on the problem of wall slip, processing and modelling of its non-linear viscoelasticity behaviour.

Rheology of food, cosmetics and pharmaceuticals—
This study demonstrates the utility of applying rheological measurements for characterizing cosmetic products based on nanoclays and relating their viscoelastic properties to end-use performances.

Rheology (/ r i ? ? ? ? d ? i /; from Greek *rhé*?, 'flow' and *-o*???, *-logia*, 'study of') is the study of the flow of matter, primarily in a liquid or gas state, but also as "soft solids" or solids under conditions in which they respond with plastic flow rather than deforming elastically in response to an applied force.Rheology is a branch of physics, and it is the science ...

Rheology—Wikipedia
However, studies of the rheological properties of flowing systems date back to Archimedes (~250 BC), Hooke (1678), Newton (1687), Stokes (1845), Maxwell (1867), Boltzman (1878), Einstein (1906), Trouton (1906), and others. 2 Characterization of the rheological properties of a system, and understanding the interaction of the various ingredients that build up the complex structure of cosmetic products is critical since it reveals why the system behaves the way it behaves under various ...

Rheology of Cosmetic Formulations—ResearchGate
Objective. The knowledge about how ingredients in formulation can influence the texture profile is an important factor on the development of a cosmetic product. In this context, the aim of this work was to evaluate the effect of vegetable oils in the texture profile, rheological and sensorial properties of cosmetic formulations based on organogel.

Influence of vegetable oils in the rheology: texture—
The objective of this study is to specify the influence of a small change in the composition of a cosmetic emulsion to its rheological and textural properties. To detect this, three cosmetic emulsions, water-in-oil body lotions, differing in a ratio of emulsifier were prepared.

The Influence of Emulsifier on Rheological and Sensory—
Rheological properties, as for example the yield point, are essential for the customer's evaluation of the end product. The Anton Paar Rotational Rheometer RheolabQC is the instrument of choice for applications in the cosmetic industry. For the characterization of hair gels we recommend to measure with a concentric cylinder measuring system CC27.
