Dreams and Sleep - Psychologist World

In Dream Psychology, Freud describes several components of the dream. The most significant is the dream-work. Freud's conception of the dream-work is rooted in the unconscious. A person's unconscious desires will manifest themselves and shape their behavior while awake, and will influence the content of the dream while asleep.

A summary of Sigmund Freud's "Dream Psychology ...

A dream can be explained as a succession of sensations, emotions, ideas, and images that occur involuntarily in a person's mind during certain stages of sleep. It's not really understood what the purpose and content of dreams are, but they have certainly been the subject of religious and philosophical interest and a topic of scientific speculation throughout recorded history.
