As the curriculums of electrical engineering programs became over crowded, many schools began combining electromechanical energy conversion and power systems analysis courses. There were no books to fit this trend, and using two books was uneconomical and confusing. Today, almost 15 % of the Universities in the US and the Canada require a combined course.

Electric power is the rate, per unit time, at which electrical energy is transferred by an electric circuit. The SI unit of power is the watt, one joule per second.. Electric power is usually produced by electric generators, but can also be supplied by sources such as electric batteries. It is usually supplied to businesses and homes (as domestic mains electricity) by the electric power industry ...
