Access Free Electronic Monitoring Of Fetal Heart Healthcare Obstetrics Practice Guide

Electronic fetal monitors continuously record the instantaneous fetal heart rate on the upper channel and uterine contractions on the lower channel. They do this by attaching, either externally (and non-invasively) or internally, to detect the fetal heart and each uterine contraction. Listen to a normal fetal heart beat.

Electronic Fetal Heart Monitoring - Hopkins Medicine

Electronic fetal monitoring uses special equipment to measure the response of the fetus ' s heart rate to contractions of the uterus. It provides an ongoing record that can be read. Your ob-gyn or other health care professional will review the electronic recording of the fetus ' s heartbeat (called the fetal heart rate tracing) at set times.

The electronic fetal monitor may be used in three different ways: External fetal monitoring, also called indirect fetal monitoring, or noninvasive fetal monitoring. This method involves the use of an ultrasonic transducer to monitor the fetal heart while the contraction pattern is monitored with a tocodynamometer.

Cardiotocography is a technical means of recording the fetal heartbeat and the uterine contractions during pregnancy.

The machine used to perform the monitoring is called a cardiotocograph, more commonly known as an electronic fetal monitor. Fetal monitoring was invented by Doctors Alan Bradfield, Orvan Hess and Edward Hon. A refined version was later developed for Hewlett Packard by Konrad Hammacher. CTG monitoring is widely used to assess fetal wellbeing. A review found that in the antenatal p
