Energy At The Crossroads Global Perspectives And Uncertainties

The greatest technical watershed in modern history took place between 1867 and 1914 when the concatenation of electricity, steam and water turbines, internal combustion engines, inexpensive steel, aluminum, explosives, synthetic fertilizers and electronic components laid the lasting technical foundations of high-energy civilization (Smil 2005). A second remarkable saltation (smaller but still hugely important) took place during the 1930s and 1940s with the introduction of gas turbines, nuclear.

Energy at the Crossroads lifts up and away from its numbers and graphs. The joy of the hot-rodder or jet pilot appears many times as Smil recounts how we have arrived at our turbo jets, our 500 kW households (including vehicles), our enormous oil tankers, so effective that shipping costs hardly change with distance.
