The failure of the 50 mph trike was most likely not caused by wear and tear on the engine, or even damaged parts, but by a simple mistake in the tuning process. Two stroke motors are VERY touchy in the tuning process, if they run too rich, they bog down and quit. if they are too lean, they will over-power themselves, and 90% of the time they ...

Turn this screw in a counterclockwise direction until the Carburetor Piston is in the lowest position. Then carefully turn the screw clockwise until it just engages the piston and then continue to turn it clockwise for 2 to 2-1/2 turns. This determines the idle RPM. of the engine and should be set at 2,000 RPM min.

## Saito Tuning.

Engine tuning is the adjustment or modification of the internal combustion engine or Engine Control Unit (ECU) to yield optimal performance and increase the engine's power output, economy, or durability. These goals may be mutually exclusive; an engine may be de-tuned with respect to output power in exchange for better economy or longer engine life due to lessened stress on engine components.
