The SI rests on a foundation of seven (7) defining constants: the cesium hyperfine splitting frequency, the speed of light in vacuum, the Planck constant, the elementary charge (i.e. the charge on a proton), the Boltzmann constant, the Avogadro constant, and the luminous efficacy of a specified monochromatic source. Definitions of all seven (7) SI base units are expressed using an explicit ...

S.I. stands for Systeme Internationale, which is also known as the International System of Units. You may not notice this but we always use this as a form of measurement. SI units have been accepted around the world as an ideal replacement to other metric systems that may cause confusion and uncertainty among people.
