[A Guide to Enterprise Architecture and Mapping](#)

An IT enterprise process framework (IT-EPF) is a mechanism for harmonizing process disparity and managing the associated complexities. It uses five architected views: alignment, process interdependence, governance, organizational operations, and process traceability. This enables clarity and visibility into critical process failure points.

[An enterprise process framework defined and delivered with ...](#)

The ARIS concept by August-Wilhelm Scheer aims to ensure that an enterprise information system can completely meet its requirements. This framework is based on a division of the model into description views and levels, which allows a description of the individual elements through specially designed methods, without having to include the entire model. The methodology serves as a systems development life cycle for mapping and optimizing business processes. These processes are mapped for each descr

[Architecture of Integrated Information Systems - Wikipedia](#)

Enterprise modelling is the abstract representation, description and definition of the structure, processes, information and resources of an identifiable business, government body, or other large organization. It deals with the process of understanding an organization and improving its performance through creation and analysis of enterprise models. This includes the modelling of the relevant business domain, business processes, and uses of information technology within the business domain and it
