He addresses neonatal infections occurring in developing countries. The data and recommendations are presented with a strong emphasis on the quality of the data, and question boxes address commonly asked questions in a useful way. Evidence-Based Neonatal Infections was a labor of love entirely written by Dr Isaacs. His authorship leads to consistency of format and of writing style that are welcomed when compared to the unevenness in many multiauthored texts.

Neonatal infections are infections of the neonate (newborn) acquired during prenatal development or in the first four weeks of life (neonatal period). Neonatal infections may be contracted by mother to child transmission, in the birth canal during childbirth, or contracted after birth. Some neonatal infections are apparent soon after delivery, while others may develop in the postnatal period. Some neonatal infections such as HIV, hepatitis B, and malaria do not become apparent until much later.

Neonatal infection - Wikipedia

Neonatal infection is a significant cause of mortality and morbidity in newborn babies. It may be early-onset (infection arising within 72 hours of birth) or late-onset (infection arising more than 72 hours after birth). Neonatal infection can lead to life-threatening sepsis and accounts for 10% of all neonatal mortality.
