So just as a reminder, volume is a measure of how much space does something take up. And it's usually measured in cubic units. And here we're talking about cubic feet. And when they say that each cube is a cubic foot, they're saying that each of these little boxes, each of these cubes here, is exactly a 1 foot by 1 foot by 1 foot cube.

The objects used are either perfect cubes or rectangular prism or are made up of such components. They extend this understanding to find volume by counting number of unit cubes in a layer and multiplying it by the number of layers in the solid. This method builds the foundation to understand how the formula $l \times w \times h$ for volume of solids works.
