? Fluids Electrolytes And
Acid Base

? Acids are electrolytes that
release hydrogen ions (H^+)

when they are dissolved in
water. ? Bases are

electrolytes that release
hydroxide ions (OH^-) when
they are dissolved in water.

? Acid-base balance is
primarily regulated by the
concentration of H^+ (or the
pH level) in body fluids,
especially ECF. © 2017

Reviews And Rationales

There are three important modes of homeostasis, which include fluid balance, acid-base balance, and electrolyte balance. In this paper, I discuss some concepts involved in fluid, electrolyte, and acid-base balance. The intracellular fluid (ICF) comprises numerous discrete and minuscule cellular packages. The intracellular fluid contains a high concentration of magnesium and potassium.

electrolyte disorders -

Summary . . .

For health, body water and electrolytes must be maintained within a limited range. Homeostatic mechanisms regulate parameters such as body fluid volume, acid-base balance (pH) and electrolyte concentrations, maintaining a delicate, dynamic balance which can be destabilised during illness.

Maintaining fluid, electrolyte and acid-base balance . . .

Description. The leading reference for the diagnosis and management of fluid, electrolyte, and acid-base

Electrolyte and Acid/Base Balance Cells maintain a balance, or homeostasis, by transference of fluid and electrolytes in and out of the cell. This fluid constantly bathes the cell. Although fluid and electrolyte balance and acid/base balance are separate entities, they directly relate to one another.
