blockage can be performed (1). In most cases, removal of the fractured instrument segment is the best alternative. However, practitioners often find orthograde fragment removal to be difficult and time consuming (2). The removal of an instrument fragment located in the apical third of the root canal is particularly complex, and

Department of Dentistry ...

However, the fractured instrument needs to be exposed at least up to 2–3 mm . Alternatively, a microtube filled with superglue (cyanoacrylate) or with dual-curing composite can be shifted over the exposed end of the fractured instrument . Using microtubes filled with adhesive materials or auto-polymerization composites is associated with some disadvantages when compared to mechanical systems, e.g., the extended superglue may set outside the tube and inside the root canal and adhere to the ...
