removing dead or broken branches. Prune within 10 feet of a utility conductor – leave it to the pros. Try to tackle a pruning job that requires a chain saw and ladder work – leave it to the pros. Leave branch stubs, or cut off the branch collar (not make a flush cut).

## ~~Tree Pruning Dos and Don'ts | Tree Care Tips~~

Trees such as Prunus sp, which are prone to silver leaf disease are best pruned from April to July when the disease spores are not on the wind, and the tree sap is rising rather than falling (which pushes out infection rather than drawing it in). Some trees can bleed sap if pruned in late winter and early spring.

## ~~Trees: pruning / RHS Gardening~~

Most walnut trees establish their shape early and do not need to be

# File Type PDF General Guidelines On Tree Pruning Greening Home

pruned regularly after their first few years of growth. The best time to prune a young walnut is in the early spring, before the growing season begins. However, pruning sometimes may be necessary at other times of year due to storm damage or other extenuating circumstances.

Aesthetics – Pruning a tree effectively helps to maintain its shape

# File Type PDF General Guidelines On Tree Pruning Greening Home

and appearance. However, you shouldn't try to impose an unnatural shape or size on a tree. The amount of trimming and pruning that will be needed could seriously damage it. Safety – Dead or broken branches and limbs can fall off at any time, which is a serious safety hazard.

~~Tree Trimming & Pruning: Tips & Techniques — Tree Removal~~  
While you should keep from pruning your new tree immediately, you will want to prune it within the first five years of its life. This is done to establish a well-balanced branch structure and a strong central leader, or trunk. With a good framework, your tree will develop an open, well-shaped crown that will support its growing form.

# File Type PDF General Guidelines On Tree Pruning Greening Home

## ~~Transplanted Trees: Watering, Fertilization & Pruning ...~~

The best time for pruning fruit trees is at planting and in subsequent years, in early spring before buds break and trees are still dormant. Pruning should be undertaken at planting time where you cut the new stem off 24 to 30 inches (61-76 cm.) from the ground and remove any side shoots.

## ~~Best Time For Pruning Fruit Trees - How To Prune A Fruit Tree~~

Proper pruning is essential in developing a tree with a strong structure and desirable form. Trees that receive the appropriate pruning measures while they are young will require less corrective pruning as they mature. A good structure of primary branches should be established while the tree is young.
