~~Meiosis Answer~~

Mitosis is the process that a somatic cell divides into two daughter cells. It is an important process in normal organism development.

Meiosis is the type of cell division by which

germ cells (eggs and sperm) are produced.

Meiosis involves a reduction in the amount of genetic material. Both types of cell division have similar phases: prophase, prometaphase, metaphase, anaphase and telophase.

During mitosis, the cell undergoes the mitotic phase, or M phase, only once, ending with two identical diploid cells. In meiosis, there are two rounds of the M phase, resulting in four haploid cells that aren't identical.

Mitosis involves the division of body cells, while meiosis involves the division of sex cells. The division of a cell occurs once in mitosis but twice in meiosis. Two daughter cells are

~~The Difference Between Mitosis and Meiosis~~

Mitosis has one round of cellular division and genetic separation whereas meiosis has

two rounds. The two processes are also different because in mitosis the daughter cells are exactly identical to the parent cells compared to meiosis where the daughter cells are not genetically identical to the parent cells.
