Genetics Problems

Codominance

Incomplete

Dominance

Solving Genetics

Problems. There is no

dominant or

Access Free Genetics

recessive, the heterozygous condition results in a "blending" of the two traits. Example:

Snapdragons can be red, white, or pink (heterozygous)

Incomplete dominance - neither allele is dominant, red x white = pink.

Codominance - both are expressed in

Access Free Genetics

some way, red x
white = white/red
spots.

Problems. You may
already know that in
the study of genetics,
dominance refers to
the relationship
between alleles,

Access Free Genetics

which are two forms of a gene. In a dominant relationship between alleles, one allele “masks” the other and influences a specific trait. When the phenotype (the observable characteristic) of the heterozygote is identical to the dominant

Access Free Genetics

homozygote, the relationship is considered to be “complete dominance.”

The genetic gist to codominance is pretty much the same as incomplete

Access Free Genetics

Dominance. A hybrid organism shows a third phenotype --- not the usual

"dominant" one & not the "recessive" one... but a third, different phenotype.

With incomplete dominance we get a blending of the dominant &

Access Free Genetics

Codominance

Incomplete dominance refers to when one allele for a certain trait is not entirely dominant over its counterpart (the other allele). The offspring end up with a combined phenotype. The traits of each parent are neither dominant or recessive and a third

Access Free Genetics

phenotype results.

~~how to construct a genetics problem that tests incomplete~~

...

Incomplete

Page 30/42

Access Free Genetics

dominance occurs in the polygenic inheritance of traits such as eye color and skin color. It is a cornerstone in the study of non-Mendelian genetics. Incomplete dominance is a form of intermediate inheritance in which one allele for a specific trait is not

Access Free Genetics

completely expressed
over its paired allele.

~~Incomplete
Dominance in
Genetics – ThoughtCo~~
Genetics Problems:

Other Patterns These
problems involve
incomplete
dominance and
multiple alleles. 1.

Two cats with
medium-length tails

Access Free Genetics

have a litter which includes 6 with medium tails, 2 with long tails, and 3 with no tails. From these data, we might infer that incomplete dominance is operating here. Explain why this seems to be true and identify the genotypes of all these cats.

Access Free Genetics Problems

~~Module 6 Activity 1
Other Patterns.rtf
Genetics Problems ...~~

Incomplete dominance can occur because neither of the two alleles is fully dominant over the other, or because the dominant allele does not fully dominate the recessive allele.

This results in a

Access Free Genetics

phenotype that is different from both the dominant and recessive alleles, and appears to be a mixture of both.
