The global positioning system (GPS)

consists of a hand-held device that is coordinated with a global system of man-made satellites and, depending on the accuracy and coordination, provides quite accurate readings of the

Access Free Global

Coordinates of the position of the device. GPS enables one to pinpoint an individual tree or a specific area or areas of the field that are affected by a pathogen, which then can be visited and examined again periodically for incremental advance of the symptoms.

~~System—Wikipedia~~

Global Positioning

System (GPS) The

GPS is a satellite-

based triangulation

system which is used

to mark the exact

location of a point (in

latitudes and

longitudes) on earth.

The GPS gives the

accurate position from

where the soil sample

is taken. The GPS is

Access Free Global

a setup of 27 satellites revolving the earth (<http://www.howstuffworks.com/gps.htm>). The American Heritage Dictionary defines GPS as a system for finding the position on the Earth's surface by using the radio signals of several satellites.
