People often question why vapor recovery units (VRUs) are not required for natural gas wells in Denton and others areas of the Barnett Shale. The answer is twofold. Firstly, VRUs are designed to capture vapor from liquid storage tanks used in the oil and gas industry. Secondly, the natural gas produced in many parts of the Barnett Shale is ''dry'', meaning that little condensate or liquids are produced '' so liquid storage tanks are not always present.

Understanding the Use of Vapor Recovery Units - BSEEC

A Vapor Recovery Unit (VRU) is a set-up designed to remove unwanted vapors present in crude oil or distillate tanks allowing operators to comply with prevailing emission regulations. VRU systems can be employed in a wide range of chemical industries with several variants available. For example, a vapor recovery system for storage tanks can be used to recover vent gas from crude oil and distillate tanks at storage facilities.
