The current development of adhesive techniques for soft tissues and slow-releasing agents will expand applications to include periodontics and oral surgery. Scientifically sound, peer-reviewed articles explore the latest innovations in these emerging fields. author guidelines (pdf-file), English; mandatory submission form (pdf-file)

**The Journal of Adhesive Dentistry**

Etch-and-rinse adhesive systems can be applied in three or two steps, always using an initial acid-etching phase on both enamel and dentin. In the three-step systems, the acid etching and rinse step is followed by the intermediate application of a primer and ends with the application of a hydrophobic resin.

The Journal publishes several types of peer-reviewed original articles: 1. Clinical and basic science research reports – based on original research in adhesive ...

**CiteSeerX — The Journal of Adhesive Dentistry GUIDELINES...**

Adhesive dentistry has lessened the need for extensive mechanical retentive features in class IV restorations. The primary retentive feature is a beveled enamel cavosurface margin of a minimum of 1.0 to 2.0 mm in length (Fig. 40.7 ). Beveling allows maximal bond strength and minimizes leakage by exposing the ends of the enamel rods to etching.
