Mayo Clinic cardiac surgeons work with a team to perform heart transplant surgery. Heart transplant surgery is an open-heart procedure that takes several hours. If you've had previous heart surgeries, the surgery is more complicated and will take longer. You'll receive medication that causes you to sleep (general anesthetic) before the procedure.

The field of heart transplantation has seen significant progress in the past 40 years. However, the breakthroughs in long-term outcome have seen stagnation in the past decade. Through advances in genomics and transcriptomics, there is hope that an era of personalized transplant therapy lies in the future. To see where heart transplantation truly fits into the long term, searching for and understanding the alternative approaches for heart failure therapy is both important and inevitable.

A heart transplant needs to be carried out as soon as possible after a donor heart becomes available. The procedure is performed under general anaesthetic, where you're asleep. While it's carried out, a heart-lung bypass machine will be used to keep your blood circulating with oxygen-rich blood. A cut is made in the middle of the chest.

When drug treatments fail, transplants are the best hope. But fewer than 2,500 donor hearts are available each year, leaving thousands of patients desperate for an alternative. In 1994, Dr. Randas...

*Pioneers of Heart Surgery | NOVA | PBS*

A heart transplant, or a cardiac transplant, is a surgical transplant procedure performed on patients with end-stage heart failure or severe coronary artery disease when other medical or surgical treatments have failed. As of 2018, the most common procedure is to take a functioning heart, with or without both lungs, from a recently deceased organ donor and implanting it into the patient. The patient's own heart is either removed and replaced with the donor heart or, much less commonly, the recip

During transplant surgery, a heart-lung machine (also called cardiopulmonary bypass) will take over your heart's function of circulating blood throughout your body. Your surgeon will make an incision down the length of your breastbone (sternum). Your diseased heart will be removed, and your new heart will be sewn into place.
