range from mild to severe, and the symptoms of depression can affect your day-to-day life. Both HIV-related medical conditions and HIV medications can contribute to depression.

~~Mental Health | HIV.gov~~

However, people with HIV have a higher risk for some mental health conditions than people who do not have HIV. For example, people living with HIV are twice as likely to have depression as people who do not have HIV. It's important to remember that mental health conditions are treatable and that people who have mental health problems can recover.
