DNA. Molecular biology was born and As the understanding of DNA and genes increased, it was clear that chemicals and radiation, or the introduction of new DNA sequences by viruses, often led to DNA damage. This damage, it was found, mapped to the same genes affected in families who had hereditary predisposition to cancer (10 - 15% of

~~Introduction Lecture The Biology Of Cancer~~

Biology is the study of living things. It encompasses the cellular basis of living things, the energy metabolism that underlies the activities of life, and the genetic basis for inheritance in organisms. Biology also includes the study of evolutionary relationships among organisms and the diversity of life on Earth. It considers the biology of microorganisms, plants, and animals, for example, and it brings together the structural and functional relationships that underlie their day-to-day ...
