Biomechatronics is an applied interdisciplinary science that aims to integrate biology and mechatronics (electrical, electronics, and mechanical engineering). It also encompasses the fields of robotics and neuroscience.

Biomechatronics - Wikipedia

In biomechatronics, the goal is to replicate the structure and function of human sensory systems to provide feedback for motion control. In this chapter, the basic structure of the human peripheral nervous system is presented along with descriptions of natural sensors. Synthetic sensors seek to replicate the function of natural sensors.
