API, or Application Programming Interface, is a term used to describe the functionality exposed by an application that allows it to be used through a program. For example, you can use Inventor's API to write a program that will perform the same types of operations you can perform when using Inventor interactively.

Getting Started with Inventor's API - Autodesk

Introduction to Using Inventor's Programming Interface There are several resources provided to help you use Inventor's Application Programming Interface (API). These resources are all part of Inventor's Software Development Kit (SDK). The various elements of the SDK and some additional external resources are described below.

Introduction to Using Inventor's Programming Interface

The Inventor application object for the current session of Inventor. From this object, you can directly access the Inventor API. For Help on the API, refer to the Programming Help, which is under Additional Resources on the Help Menu. This object is also accessible using the older syntax:

The Inventor API API, or Application Programming Interface, is the recipe for "doing" in Inventor. If you want to draw a line in a sketch, you select the Line button and then you input what Inventor requires. First, you select a start-point, then you select an end-point.

The Four Key Aspects of Inventor Automation - Autodesk

Read the documentation for a particular backend for detailed information on its API; this simply provides a general overview. For KVv1, reading a secret via the HTTP API is done by issuing a GET: /v1/secret/foo This maps to secret/foo where foo is the key in the secret/ mount, which is mounted by default on a fresh Vault install and is of type kv.
